

# Screen Master® 4-mm Oval LEDs: C4SMB-RGY/GGY/BGY

### **PRODUCT DESCRIPTION**

These oval LEDs are specifically designed for full-color video screens, digital billboards and passenger-information signs. The oval-shaped radiation pattern and high luminous intensity ensure that these devices are excellent for bright sunlight or low power consumption outdoor applications.

These lamps are made with an advanced optical-grade epoxy that offers superior high-temperature and high-moisture-resistance performance in outdoor signal and sign applications. The encapsulation resin contains anti-UV material in order to reduce the effects of long-term exposure to direct sunlight.

### **FEATURES**

- Size (mm): 4
- Color and Typical Dominant Wavelength: Red (621nm) Green(524nm) Blue(470nm)
- Luminous Intensity (mcd)
   C4SMB-RGY: (1976-4600)@20mA
   C4SMB-GGY: (5020-12000)@20mA
   C4SMB-BGY: (934-2130)@20mA
- Lead Free
- RoHS Compliant

### **APPLICATIONS**

- Electronic Signs & Signals (ESS)
- Full Color Video Screen
- · Digital Billboards
- · Motorway Signs
- · Variable Message Sign (VMS)
- · Advertising Signs
- · Petrol Signs

### Notes:

- The above kit numbers represent order codes that include multiple intensity-bin and color-bin codes. Only one intensity-sub-bin code and one color-bin code will be shipped on each reel. Selected single intensity-bin, single color-bin codes will be orderable in certain quantities. For example, any four consecutive sub-bins from X4 to Z1 mean only one intensity bin with four sub-bins of the following brightness ranges (X4-Y3, Y1-Y4, Y2-Z1) will be shipped by Cree LED. For example, any one-color bin from G7 to Ga means only one color bin (G7 or G23 or G8 or G45 or G9 or G67 or Ga) will be shipped by Cree LED.
- Please refer to the HB LED Lamp Reliability Test Standards document for reliability test conditions.
- Please refer to the HB LED Lamp Soldering & Handling document for information about how to use this LED product safely.

### **GRAPHS**

The data below are collected from statistical figures that do not necessarily correspond to the actual parameters of each single LED. Hence, these data will be changed without further notice.

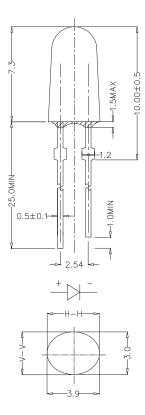

### **MECHANICAL DIMENSIONS**

All dimensions are in mm. Tolerance is ±0.25 mm unless otherwise noted.

An epoxy meniscus may extend about 1.5 mm down the leads.

Burr around bottom of epoxy may be 0.5 mm max.

### **NOTES**

### **Lead Frame Materials**

Ag-plated and Lead-free Solder-plated iron.

### **RoHS Compliance**

The levels of RoHS restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2011/65/EC (RoHS2), as implemented January 2, 2013. RoHS Declarations for this product can be obtained from your Cree LED representative or from the Product Ecology section of the Cree LED website.

### **Vision Advisory**

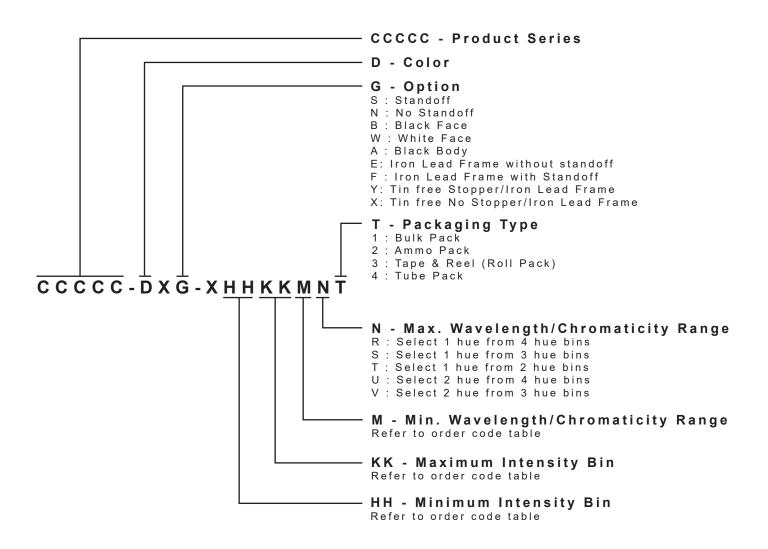

WARNING: Do not look at an exposed lamp in operation. Eye injury can result.

### KIT NUMBER SYSTEM

Cree LED lamps are tested and sorted into performance bins. A bin is specified by ranges of color, forward voltage, and brightness. Sorted LEDs are packaged for shipping in various convenient options.

Cree LEDs are sold by order codes in combinations of bins called kits. Order codes are configured in the following manner:

 $<sup>^{\</sup>star}$  Please contact our sales representative for ordering information.

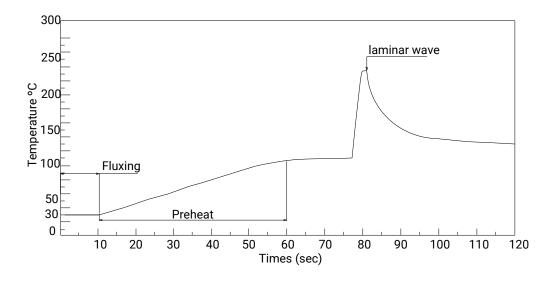

### **SOLDERING GUIDELINES**

The LED soldering specification is shown below(suitable for both leaded solder & lead-free solder):

	Manual Soldering	Solder Dipping			
Soldering iron	35 W max	Preheat	110 °C max		
	300 00 may	Preheat time	60 seconds max		
Temperature	300 °C max	Solder-bath temperature	260 °C Max		
Soldering time	3 seconds max	Dipping time	5 seconds max		
Position	Not less than 3 mm from the base of the package.	Position	Not less than 3 mm from the base of the package.		

- Manual soldering onto the PCB is not recommended because soldering time is uncontrollable.
- · The recommended wave soldering is as below:

- · Do not apply any stress to the LED package, particularly when heated.
- · Only bottom preheat is suggested & should not preheat on top in order to reduce thermal stress experienced by the LEDs.
- The LEDs must not be re used once they have been extracted from PCB.
- After soldering the LEDs, the package should be protected from mechanical shock or vibration until the LEDs have reached 40 °C or below.
- Precautions must be taken as mechanical stress on the LEDs may be caused by PCB warpage or from the clinching and cutting of the LED leads.
- · When it is necessary to clam the LEDs during soldering, it is important to ensure no mechanical stress is exerted on the LEDs.
- · Cut the LED lead at normal room temperature. Lead cutting at high temperature may cause failure of the LEDs.
- Please refer to the HB LED Lamp Soldering & Handling document for information about how to use this LED product safely.

### **PACKAGING**

- · The LEDs are packed in cardboard boxes after packaging in normal or anti-electrostatic bags.
- · Cardboard boxes will be used to protect the LEDs from mechanical shock during transportation.
- The boxes are not water resistant, and they must be kept away from water and moisture.
- Max 1000 pcs per bulk and Max 3000 pcs per ammo.
